

## The New Potatoe Culture as Developed by the Trench System, by the Judicious Use of Chemical Fertilizers, and by the Experiments Carried on at the Rural Grounds During the Past Fifteen Years

By Elbert S Carman

Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book \*\*\*\*\* Print on Demand \*\*\*\*\*.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1891 Excerpt: .over. 9.68 CHAPTER X. Results of Planting Potatoes in Trenches of Different Depths. FIRST TRIALS. THE soil of these plots, naturally variable, was made exceedingly so by grading, the soil from the higher parts having been carted to the lower places. It is in some parts a sandy loam, in others a clay loam, and in still other parts a stiff brick-clay, all impoverished by years of cropping without any manure of any kind. These potato experiments were in previous years made on plots of notably uniform soil, so impoverished that anything short of a complete fertilizer failed to materially increase the crops. This was proven so conclusively that there seemed to be no reason why the trials should be continued upon them. The following exhibit, as might well have been anticipated from the variability of the soil, seems to show that the depth of planting...
